What advantages does Boost Juice give contractors?

By using Boost Juice, contractors do not need:

- A full charge to install when using Boost Juice Inject (full charge preferred for Boost Juice Kit)
- Tools or manifold gauges to install
- To worry about spending much time installing as either solution can be done under five minutes
- To worry about mixing refrigerants and oils as Boost Juice is compatible with all
- To worry about polymerization as Boost Juice is polymer free
- To worry about reclaiming refrigerant as Boost Juice does not use propellants when injecting
- To worry about adding too much solution to a system as 992 and 993KIT only have two ounces of product

Boost Juice will improve:

- Customer satisfaction by saving money
- The life of the system

Boost Juice is available in a kit with a can or four-foot flexible hose with solution included.

Finally, DO NOT drink or try to consume Boost Juice!

### About DiversiTech

Founded in 1971, DiversiTech Corporation is the largest manufacturer of equipment pads. It is also the leading North American manufacturer and supplier of accessory components and related products for the heating, ventilation, air conditioning, and refrigeration (HVAC/R) markets. Headquartered in the metropolitan Atlanta, Georgia area, DiversiTech's mission to its customers is to simplify their work.

# BOOST JUICE® SOLUTIONS

HVAC/R SYSTEM PERFORMANCE ENHANCER

## BOOST JUICE® SOLUTIONS

Boost Juice® is an HVAC/R system performance improvement additive that lowers energy costs by reducing the amperage draw up to 22% on a system when running. It does this by lubricating the components, removing moisture and oxygen, and dissolving particle debris to a molecular level. This debris is captured in the liquid line drier reducing drag and friction for the refrigerant and oil.

By using Boost Juice, your customers can expect to see noticeable improvements in system performance typically within 24 to 72 hours (depending on the state of the system - new versus old) with consistent future performance. Noise levels will also be reduced once Boost Juice is installed providing a long-term benefit to your customers.

### Additional features and benefits for owners:

- Enhances systems performance, saving money on electric bills
- Reduces compressor noise
- Reduces energy consumption lowering starting and running amps
- Rejuvenates older systems
- Cleans interior linesets and system components removing loose deposits
- Improves oil lubricity through reduced friction and drag while blending with system oil and refrigerant
- Eliminates up to 20 drops of internal moisture prolonging system life
- Prevents acid formation

Through lab and field tests on new and old installations, Boost Juice reduced air conditioning system energy amperage on average by 13%. In addition to improved system cooling performance, the decibel level coming from noisy compressors was reduced .5 to 2 decibels.

## FAST & EASY (HOSE AND CAN INJECTION SOLUTIONS)

Boost Juice Inject  
Part# 992

Boost Juice  
Part# 993KIT

## BOOST JUICE INJECT

Boost Juice Inject uses DiversiTech's patent pending flexible hose and misting orifice technology to deliver fast and effective HVAC/R system improvements. Boost Juice Inject uses the system's high side service port coupled with a push button device on the hose to inject the solution into the low side service port. With no runtime required after injection, the Boost Juice Inject formula goes to work immediately. Boost Juice Inject can be introduced at anytime before or after topping off and easily installs in less than five minutes.

### Application Guide

- One hose for systems up to 6 tons or 20 KW
- For more than 6 tons, use one additional hose for every 32 ounces of oil with large systems

Boost Juice Inject  
Part# 992

## BOOST JUICE IN KIT (VACUUM-SEALED CAN W/ HOSE)

Boost Juice in a kit solution has the same benefits as Boost Juice Inject. It comes with a two ounce vacuum-sealed can and a one-time use hose. Boost Juice in a kit just as Boost Juice Inject does not break the oil down but instead builds on it while removing deposits from the interior pipe walls and mechanicals. Unlike Boost Juice Inject, it is preferred that the Boost Juice in a can is installed into a fully charged system.

### Application Guide

- One can for systems up to 6 tons or 20 KW
- For more than 6 tons, use one additional hose for every 32 ounces of oil with large systems

## WHAT DOES DIVERSITECH RECOMMEND FOR OPTIMIZING HVAC/R SYSTEM PERFORMANCE?

It is well known that poor HVAC/R system performance increases energy cost. DiversiTech's chemists and engineers have developed a two-step process for achieving maximum system performance.

**Step 1:** Use DiversiTech's coil cleaning solutions for condensers and evaporators. DiversiTech provides multiple cleaning solution methods including:

- Concentrated cleaners
- Aerosols
- Ready-to-use products

**Step 2:** Add Boost Juice. Boost Juice not only enhances system performance saving customers money by reducing amperage, but also:

- Eliminates up to 20 drops of internal moisture
- Protects against corrosion
- Protects against acid formation
- Reduces compressor noise
- Frees up TXVs and metering devices
- Dissolves blockages
- Boosts efficiency

In addition to these great benefits, it installs in less than five minutes and is now available in two dispensing methods: A kit with a can and hose (993KIT) or flexible hose with solution included (992).

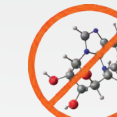

Do you know that all DiversiTech Sealants and Additives in flexible hose and can with hose kit solutions offer these benefits?
